

US PATENT #6,648,008 B1

WASH WATER CONTAINMENT

Product Overview

The Porta-Pad wash pad offers a cost effective alternative to fixed wash pads. Wash vehicles, boats, ATV's, off-road, deacon equipment and/or wash parts, then pack it away for later use. Works on concrete, sand, and/or asphalt.

Features

- Anti fly-away design: No inflation; will not pop.
- Marine grade commercial duty matting
- UV stable and designed for harsh conditions
- Stitched and welded seams, vented tubes
- Economical & durable enough for 30 cars per day and years of use
- Portable and lightweight
- Compact storage until needed

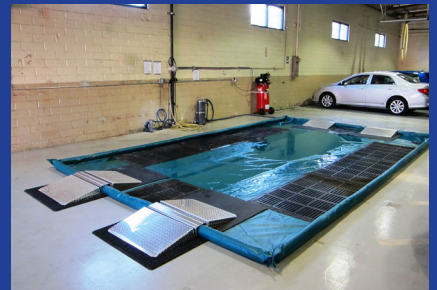

Options and Accessories

- Additional set of ramps for pull-through or tight access to wash area
- Heavy duty cast aluminum ramps for higher overall load capacity
- Additional anti-fatigue pads
- Available in custom sizes
- LS-55 1/3rd HP (120V 15A) lift station with bag

Parts Included

- Porta-Pad Containment Liner
- Low level pump down pump and countdown timed pump controller
- One pair of aluminum low-profile ramps
- 15' 3/4" discharge hose FGHXFGH
- Protective ramp pads to extend life of pad
- Anti-fatigue pads to minimize fatigue when standing/washing cars for long periods of time

- Canopy and overhead booms
- Pressure washers with remote location controls (faster washing and less water usage)
- Heavy duty wet/dry s/s vacuums
- Filter for pumping longer distances

The effluent and runoff from vehicle washing activities cause damage to the environment, especially to rivers and streams. The dirt, oil and metals that get washed off the cars surface, tires and brakes combined with cleaning agents migrating to the storm drains are very toxic in even small quantities to fish and wildlife and their food source.
